AmputeData	<i>Ampute Data</i>
------------	--------------------

Description

The function generates a data set with missing values for data generated by GenData using the multivariate amputation approach. See `mice::ampute()` for more details.

Usage

```
AmputeData(data_complete, mech = "MAR", prop = 0.3, patterns = NULL)
```

Arguments

- `data_complete` Numeric matrix. Output of the GenData function or a three-column data set with complete data.
- `mech` Missing data mechanism.
- `prop` Proportion of missing data.
- `patterns` Numeric matrix consisting of zeroes and ones. Each row in the matrix represents a missing data pattern where 0 indicates a missing observation. If `patterns = NULL`, the default value is all possible missing data patterns for a data set with 3 columns.

Value

Returns a dataframe.

Check	<i>Check Replication</i>
-------	--------------------------

Description

Check Replication

Usage

Check(taskids, repids, output_folder, nbmi)

Arguments

- taskids Vector of taskids.
- repids Vector of repids.
- output_folder Character string. Output folder.
- nbmi Logical. If nbmi = TRUE, include MINB, NBMI, and StackedMINB.

Value

Returns file names of replications that need to be run.

Author(s)

Ivan Jacob Agaloos Pesigan

CheckAmputeData	<i>Check Replication - SimAmputeData</i>
-----------------	--

Description

Check Replication - SimAmputeData

Usage

CheckAmputeData(taskid, repid, output_folder, suffix)

Arguments

- taskid Positive integer. Task ID.
- repid Positive integer. Replication ID.
- output_folder Character string. Output folder.
- suffix Character string. Output of `manMCMedMiss:::SimSuffix()`.

Details

This function is executed via the Check function.

Value

Returns file names of replications that need to be run.

Author(s)

Ivan Jacob Agaloos Pesigan

CheckFitModelMI

Check Replication - SimFitModelMI

Description

Check Replication - SimFitModelMI

Usage

```
CheckFitModelMI(taskid, repid, output_folder, suffix)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .

Details

This function is executed via the Check function.

Value

Returns file names of replications that need to be run.

Author(s)

Ivan Jacob Agaloos Pesigan

CheckFitModelML	<i>Check Replication - SimFitModelML</i>
-----------------	--

Description

Check Replication - SimFitModelML

Usage

```
CheckFitModelML(taskid, repid, output_folder, suffix)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .

Details

This function is executed via the Check function.

Value

Returns file names of replications that need to be run.

Author(s)

Ivan Jacob Agaloos Pesigan

CheckGenData	<i>Check Replication - SimGenData</i>
--------------	---------------------------------------

Description

Check Replication - SimGenData

Usage

```
CheckGenData(taskid, repid, output_folder, suffix)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .

Details

This function is executed via the Check function.

Value

Returns file names of replications that need to be run.

Author(s)

Ivan Jacob Agaloos Pesigan

CheckImputeData

Check Replication - SimImputeData

Description

Check Replication - SimImputeData

Usage

```
CheckImputeData(taskid, repid, output_folder, suffix)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .

Details

This function is executed via the Check function.

Value

Returns file names of replications that need to be run.

Author(s)

Ivan Jacob Agaloos Pesigan

CheckJointSigMI	<i>Check Replication - SimJointSigMI</i>
-----------------	--

Description

Check Replication - SimJointSigMI

Usage

CheckJointSigMI(taskid, repid, output_folder, suffix)

Arguments

- taskid Positive integer. Task ID.
- repid Positive integer. Replication ID.
- output_folder Character string. Output folder.
- suffix Character string. Output of manMCMedMiss:::SimSuffix().

Details

This function is executed via the Check function.

Value

Returns file names of replications that need to be run.

Author(s)

Ivan Jacob Agaloos Pesigan

CheckJointSigML	<i>Check Replication - SimJointSigML</i>
-----------------	--

Description

Check Replication - SimJointSigML

Usage

CheckJointSigML(taskid, repid, output_folder, suffix)

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
suffix	Character string. Output of manMCMedMiss:::SimSuffix().

Details

This function is executed via the Check function.

Value

Returns file names of replications that need to be run.

Author(s)

Ivan Jacob Agaloos Pesigan

CheckMCMI

Check Replication - SimMCMI

Description

Check Replication - SimMCMI

Usage

```
CheckMCMI(taskid, repid, output_folder, suffix)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
suffix	Character string. Output of manMCMedMiss:::SimSuffix().

Details

This function is executed via the Check function.

Value

Returns file names of replications that need to be run.

Author(s)

Ivan Jacob Agaloos Pesigan

CheckMCML	<i>Check Replication - SimMCML</i>
-----------	------------------------------------

Description

Check Replication - SimMCML

Usage

CheckMCML(taskid, repid, output_folder, suffix)

Arguments

- taskid Positive integer. Task ID.
- repid Positive integer. Replication ID.
- output_folder Character string. Output folder.
- suffix Character string. Output of manMCMedMiss:::SimSuffix().

Details

This function is executed via the Check function.

Value

Returns file names of replications that need to be run.

Author(s)

Ivan Jacob Agaloos Pesigan

CheckMINB	<i>Check Replication - SimMINB</i>
-----------	------------------------------------

Description

Check Replication - SimMINB

Usage

CheckMINB(taskid, repid, output_folder, suffix)

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .

Details

This function is executed via the Check function.

Value

Returns file names of replications that need to be run.

Author(s)

Ivan Jacob Agaloos Pesigan

CheckNBMI

Check Replication - SimNBMI

Description

Check Replication - SimNBMI

Usage

```
CheckNBMI(taskid, repid, output_folder, suffix)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .

Details

This function is executed via the Check function.

Value

Returns file names of replications that need to be run.

Author(s)

Ivan Jacob Agaloos Pesigan

CheckNBML	<i>Check Replication - SimNBML</i>
-----------	------------------------------------

Description

Check Replication - SimNBML

Usage

CheckNBML(taskid, repid, output_folder, suffix)

Arguments

- taskid Positive integer. Task ID.
- repid Positive integer. Replication ID.
- output_folder Character string. Output folder.
- suffix Character string. Output of manMCMedMiss:::SimSuffix().

Details

This function is executed via the Check function.

Value

Returns file names of replications that need to be run.

Author(s)

Ivan Jacob Agaloos Pesigan

Compress	<i>Compress Replication</i>
----------	-----------------------------

Description

Compress Replication

Usage

Compress(taskid, repid, output_folder)

Arguments

- taskid Positive integer. Task ID.
- repid Positive integer. Replication ID.
- output_folder Character string. Output folder.

Value

The output is saved as an external file in output_folder.

elliott2007	<i>Intervention on Healthy Dietary Behavior Via Knowledge of Healthy Dietary Behavior</i>
-------------	---

Description

A study by Elliot and others (2007) on the effects of an intervention on healthy dietary behavior mediated by knowledge of healthy dietary behavior. This data was used as an empirical example in Yuan and MacKinnon (2009) and Wu and Jia (2013).

Usage

elliott2007

Format

A data frame with 354 cases and 3 variables:

- x** Intervention group membership.
- m** Knowledge of healthy dietary behavior (knowledge post-intervention minus knowledge pre-intervention).
- y** Healthy dietary behavior (behavior post-intervention minus behavior pre-intervention).

FigBoxPlot*Box Plot of Type I Error Rate, Statistical Power, and Miss Rate*

Description

Box Plot of Type I Error Rate, Statistical Power, and Miss Rate

Usage

```
FigBoxPlot(results, type, mech, prop, n = NULL)
```

Arguments

results	Data frame. The package data frame <code>results()</code> .
type	Character string. Type of results to plot. Valid values are "type1", "power", and "miss" for Type I error rate, statistical power, and miss rate, respectively.
mech	Character string. Missing data mechanism. Valid values are "COMPLETE", "MAR", and "MCAR".
prop	Numeric. Proportion of missing data. Valid values are .1, .2, .3. Note that if <code>mech = "COMPLETE"</code> , <code>prop</code> will be set to 0.
n	Vector of positive integers. Sample size. Valid values are 50, 75, 100, 150, 200, 250, 500, and 1000. If <code>n = NULL</code> , use all sample sizes.

Value

Returns a `ggplot2` plot object.

FigScatterPlot	<i>Scatter Plot of Type I Error Rate, Statistical Power, and Miss Rate</i>
----------------	--

Description

Scatter Plot of Type I Error Rate, Statistical Power, and Miss Rate

Usage

```
FigScatterPlot(results, type, mech, prop, n = NULL)
```

Arguments

results	Data frame. The package data frame <code>results()</code> .
type	Character string. Type of results to plot. Valid values are "type1", "power", and "miss" for Type I error rate, statistical power, and miss rate, respectively.
mech	Character string. Missing data mechanism. Valid values are "COMPLETE", "MAR", and "MCAR".
prop	Numeric. Proportion of missing data. Valid values are .1, .2, .3. Note that if <code>mech = "COMPLETE"</code> , <code>prop</code> will be set to 0.
n	Vector of positive integers. Sample size. Valid values are 50, 75, 100, 150, 200, 250, 500, and 1000. If <code>n = NULL</code> , use all sample sizes.

Value

Returns a `ggplot2` plot object.

FitModelIndirect	<i>Fit the Simple Mediation Model using Normal Theory Maximum Likelihood (Indirect Effect)</i>
------------------	--

Description

Fit the Simple Mediation Model using Normal Theory Maximum Likelihood (Indirect Effect)

Usage

```
FitModelIndirect(data_complete, consistent = TRUE)
```

Arguments

data_complete	Numeric matrix. Output of the GenData function or a three-column data set with complete data.
consistent	Logical. If consistent = TRUE, use the consistent estimate of the covariance matrix (maximum likelihood estimator). If consistent = FALSE, use the unbiased estimate of the covariance matrix.

Value

Returns the indirect effect.

Author(s)

Ivan Jacob Agaloos Pesigan

FitModelMI	<i>Fit the Simple Mediation Model using Multiple Imputation</i>
------------	---

Description

Fit the Simple Mediation Model using Multiple Imputation

Usage

```
FitModelMI(data_mi, mplus_bin)
```

Arguments

<code>data_mi</code>	List of numeric matrices. Output of the <code>ImputeData</code> function or a list of three-column data sets with imputed data.
<code>mplus_bin</code>	Character string. Path of Mplus binary.

Details

Let

$M = \text{Number of imputations, and}$

$$m = \{1, 2, \dots, M\}.$$

The vector of pooled coefficients/parameter estimates is given by

$$\bar{\theta} = M^{-1} \sum_{m=1}^M \hat{\theta}_m.$$

The covariance within imputations is given by

$$\mathbf{V}_{\text{within}} = M^{-1} \sum_{m=1}^M \text{Var}(\hat{\theta}_m)$$

where $\text{Var}(\hat{\theta}_m)$ is the parameter covariance matrix for the m^{th} imputation. The covariance between imputations is given by

$$\mathbf{V}_{\text{between}} = (M - 1)^{-1} \sum_{m=1}^M (\hat{\theta}_m - \bar{\theta})(\hat{\theta}_m - \bar{\theta})'.$$

The total covariance matrix is given by

$$\mathbf{V}_{\text{total}} = \mathbf{V}_{\text{within}} + \mathbf{V}_{\text{between}} + M^{-1} \mathbf{V}_{\text{between}}.$$

The adjusted total covariance matrix is given by

$$\tilde{\mathbf{V}}_{\text{total}} = (1 + \text{ARIV}) \mathbf{V}_{\text{within}}$$

where

$$\text{ARIV} = k^{-1} [(1 + M^{-1}) \text{tr}(\mathbf{V}_{\text{between}} \mathbf{V}_{\text{within}}^{-1})]$$

and k is the number of parameters.

Value

Returns a list with the following elements:

coef Vector of pooled coefficients/parameter estimates $\bar{\theta}$.

vcov Total covariance matrix $\mathbf{V}_{\text{total}}$.

vcov_tilde Adjusted total covariance matrix $\tilde{\mathbf{V}}_{\text{total}}$.

vcov_between Covariance between imputations $\mathbf{V}_{\text{between}}$.

- vcov_within** Covariance within imputations V_{within} .
- ariv** Average relative increase in variance ARIV.
- m** Number of imputations M .
- k** Number of parameters k .
- nu1** Numerator degrees of freedom ν_1 for D_1 .
- nu2** Denominator degrees of freedom ν_2 for D_1 .
- d1** D_1 test statistic.

FitModelML	<i>Fit the Simple Mediation Model using Normal Theory Maximum Likelihood</i>
------------	--

Description

Fit the Simple Mediation Model using Normal Theory Maximum Likelihood

Usage

```
FitModelML(data, mplus_bin)
```

Arguments

- data** Numeric matrix. Output of the GenData or AmputeData functions.
- mplus_bin** Character string. Path of Mplus binary.

Value

Returns a list with the following elements:

fit Model fit.

coef Coefficients/parameter estimates

vcov Sampling variance-covariance matrix.

output Mplus output.

Values in `fit`.

free_parameters Number of free parameters

h0_loglikelihood H0 loglikelihood.

h1_loglikelihood H1 loglikelihood.

aic Akaike information criterion (AIC).

bic Bayesian information criterion (BIC).

sabik Sample-size adjusted BIC (SABIC).

chisq Chi-square value.

chisq_df Chi-square degrees of freedom.

chisq_p Chi-square p-value.

cfi Comparative fit index (CFI).

tli Tucker–Lewis index (TLI).

rmsea Root mean square error of approximation (RMSEA) estimate.

rmsea_low Root mean square error of approximation (RMSEA) lower limit confidence interval.

rmsea_up Root mean square error of approximation (RMSEA) upper limit confidence interval.

rmsea_p Root mean square error of approximation (RMSEA) probability.

srmr Standardized root mean square residual (SRMR).

condition_number Condition number for the information matrix (ratio of smallest to largest eigenvalue).

GenData

*Generate Data***Description**

Let the simple mediation model be defined by the equations

$$Y = \delta_Y + \tau'X + \beta M + \varepsilon_Y,$$

and

$$M = \delta_M + \alpha X + \varepsilon_M.$$

The function generates data from the multivariate normal distribution using the model-implied mean vector and covariance matrix of the simple mediation model. See `MASS::mvrnorm()` for more details.

Usage

```
GenData(n = 100L, tauprime = 0, beta = 0.5, alpha = 0.5, mu = 0, sigmasq = 1)
```

Arguments

n	Positive integer. Sample size.
tauprime	Numeric. τ' , that is, the slope for Y regressed on X , adjusting for M .
beta	Numeric. β , that is, the slope for Y regressed on M , adjusting for X .
alpha	Numeric vector. Significance level.
mu	Numeric. Common mean for X , M , and Y , that is, $\mu_X = \mu_M = \mu_Y$.
sigmasq	Numeric. Common variance for X , M , and Y , that is, $\sigma_X^2 = \sigma_M^2 = \sigma_Y^2$.

Value

Returns a matrix.

ImputeData	<i>Impute Data</i>
------------	--------------------

Description

Generates m complete data sets using multiple imputation.

Usage

```
ImputeData(data_missing, m, mplus_bin)
```

Arguments

data_missing	Numeric matrix. Output of the AmputeData function or a three-column data set with missing data.
m	Positive integer. Number of imputations.
mplus_bin	Character string. Path of Mplus binary.

Value

Returns a list of complete data sets.

JointSigMI	<i>Joint Significance Test for the Indirect Effect using Multiple Imputation</i>
------------	--

Description

Joint Significance Test for the Indirect Effect using Multiple Imputation

Usage

```
JointSigMI(fit_mi, alpha = c(0.05, 0.01, 0.001))
```

Arguments

`fit_mi` Object. Output of the `FitModelMI` function.
`alpha` Numeric vector. Significance level.

Value

Returns a list with the following elements:

vcov Joint significance test based on the total covariance matrix.

vcov_tilde Joint significance test based on the adjusted total covariance matrix.

Note the 1 corresponds to a significant result and 0 otherwise. The output vector's name corresponds to the alpha level.

JointSigML	<i>Joint Significance Test for the Indirect Effect using Normal Theory Maximum Likelihood</i>
------------	---

Description

Joint Significance Test for the Indirect Effect using Normal Theory Maximum Likelihood

Usage

```
JointSigML(fit_ml, alpha = c(0.05, 0.01, 0.001))
```

Arguments

`fit_ml` Object. Output of the `FitModelML` function.
`alpha` Numeric vector. Significance level.

Value

Note the 1 corresponds to a significant result and 0 otherwise. The output vector's name corresponds to the alpha level.

MCMC

Monte Carlo Confidence Intervals for the Indirect Effect using Multiple Imputation

Description

Monte Carlo Confidence Intervals for the Indirect Effect using Multiple Imputation

Usage

```
MCMC(fit_mi, R = 20000L, alpha = c(0.05, 0.01, 0.001))
```

Arguments

<code>fit_mi</code>	Object. Output of the <code>FitModelMI</code> function.
<code>R</code>	Positive integer. Number of Monte Carlo replications.
<code>alpha</code>	Numeric vector. Significance level.

Value

Returns a list with the following elements:

vcov Monte Carlo confidence intervals based on the total covariance matrix.

vcov_tilde Monte Carlo confidence intervals based on the adjusted total covariance matrix.

```

Arguments

fit_ml	Object. Output of the FitModelML function.
R	Positive integer. Number of Monte Carlo replications.
alpha	Numeric vector. Significance level.

Value

Monte Carlo confidence intervals.

MICombine	<i>Combine Parameter Estimates Vector and Sampling Variance-Covariance Matrix Estimated from Multiple Imputations</i>
-----------	---

Description

Combine Parameter Estimates Vector and Sampling Variance-Covariance Matrix Estimated from Multiple Imputations

Usage

```
MICombine(param_vec, var_mat)
```

Arguments

param_vec List of vectors of parameter estimates.
var_mat List of matrices of sampling variances and covariances.

Value

Returns a list with the following elements:

m Number of imputations M .
k Number of parameters k .
estimates Vector of pooled coefficients/parameter estimates $\bar{\theta}$.
within Covariance within imputations $\mathbf{V}_{\text{within}}$.
between Covariance between imputations $\mathbf{V}_{\text{between}}$.
total Total covariance matrix $\mathbf{V}_{\text{total}}$.
total_adjusted Adjusted total covariance matrix $\tilde{\mathbf{V}}_{\text{total}}$.
ariv Average relative increase in variance ARIV.

 MINB

Nonparametric Bootstrap Confidence Intervals for the Indirect Effect using Multiple Imputation (NB nested within MI or MI(NB))

Description

Nonparametric Bootstrap Confidence Intervals for the Indirect Effect using Multiple Imputation (NB nested within MI or MI(NB))

Usage

```
MINB(data_mi, B = 5000L, alpha = c(0.05, 0.01, 0.001))
```

Arguments

data_mi	List of numeric matrices. Output of the ImputeData function or a list of three-column data sets with imputed data.
B	Positive integer. Number of bootstrap samples.
alpha	Numeric vector. Significance level.

Value

Nonparametric bootstrap percentile confidence intervals.

NBMI	<i>Nonparametric Bootstrap Confidence Intervals for the Indirect Effect using Multiple Imputation (MI nested within NB or NB(MI))</i>
------	---

Description

Nonparametric Bootstrap Confidence Intervals for the Indirect Effect using Multiple Imputation (MI nested within NB or NB(MI))

Usage

```
NBMI(
  data_missing,
  data_mi,
  B = 5000L,
  m = 100L,
  alpha = c(0.05, 0.01, 0.001),
  mplus_bin
)
```

Arguments

data_missing	Numeric matrix. Output of the AmputeData function or a three-column data set with missing data.
data_mi	List of numeric matrices. Output of the ImputeData function or a list of three-column data sets with imputed data.
B	Positive integer. Number of bootstrap samples.
m	Positive integer. Number of imputations.
alpha	Numeric vector. Significance level.
mplus_bin	Character string. Path of Mplus binary.

Value

Nonparametric bootstrap percentile confidence intervals.

NBML	<i>Nonparametric Bootstrap Confidence Intervals for the Indirect Effect using Normal Theory Maximum Likelihood (ML nested within NB or NB(ML))</i>
------	--

Description

Nonparametric Bootstrap Confidence Intervals for the Indirect Effect using Normal Theory Maximum Likelihood (ML nested within NB or NB(ML))

Usage

NBML(data, B = 5000L, mplus_bin)

Arguments

- data Numeric matrix. Output of the GenData or AmputeData functions.
- B Positive integer. Number of bootstrap samples.
- mplus_bin Character string. Path of Mplus binary.

Value

Nonparametric bootstrap confidence intervals. bc corresponds to bias-corrected and pc corresponds to percentile confidence intervals.

params	<i>Simulation Parameters</i>
--------	------------------------------

Description

Simulation Parameters

Usage

params

Format

A dataframe with 472 rows and 7 columns:

- taskid** Simulation Task ID.
- tauprime** τ' , that is, the path from X to Y , adjusting for M .
- beta** β , that is, the path from M to Y .
- alpha** α , that is, the path from X to M .
- n** Sample size.
- sigmasqepsilon_m** Error variance $\sigma^2_{\epsilon_M}$.
- sigmasqepsilon_y** Error variance $\sigma^2_{\epsilon_Y}$.
- alphabeta** $\alpha\beta$, that is, the indirect effect of X on Y via M .

Author(s)

Ivan Jacob Agaloos Pesigan

results

*Simulation Results***Description**

Simulation Results

Usage

results

Format

A dataframe with 24,544 rows and 13 columns:

zero_hit The proportion of replications where the confidence intervals contained zero.**theta_hit** The proportion of replications where the confidence intervals contained the population α/β .**replications** Simulation replications.**taskid** Simulation Task ID.**tauprime** τ' , that is, the path from X to Y , adjusting for M .**beta** β , that is, the path from M to Y .**alpha** α , that is, the path from X to M .**n** Sample size.**sigmasqepsilnm** Error variance $\sigma_{\varepsilon_M}^2$.**sigmasqepsilony** Error variance $\sigma_{\varepsilon_Y}^2$.**alphabeta** $\alpha\beta$, that is, the indirect effect of X on Y via M .**mechanism** Missing data mechanism. "COMPLETE" for complete data, "MCAR" for missing completely at random, and "MAR" for missing at random.**proportion** Proportion of missing data (.0, .1, .2, .3).**method** Method used.**type1** Type I error rate.**power** Statistical power.**miss** Miss rate.

The methods are as follows:

MC.COMPLETE for Monte Carlo method with maximum likelihood estimates for complete data.**MC.FIML** for Monte Carlo method with full information maximum likelihood estimates.**MC.MI** for Monte Carlo method with multiple imputation estimates.**MC.MI.ADJ** for Monte Carlo method with adjusted multiple imputation estimates.

- NBBC.COMPLETE** for bias-corrected nonparametric bootstrap with maximum likelihood estimates for complete data.
- NBBC.FIML** for full maximum likelihood nested within bias-corrected nonparametric bootstrap.
- NBPC.COMPLETE** for percentile nonparametric bootstrap with full maximum likelihood estimates for complete.
- NBPC.FIML** for full maximum likelihood nested within percentile nonparametric bootstrap.
- SIG.COMPLETE** for joint-significant test for complete data.
- SIG.FIML** for the joint-significant test with full maximum likelihood estimates.
- SIG.MI** for joint-significant test with multiple imputation estimates.
- SIG.MI.ADJ** for the joint-significant test with adjusted multiple imputation estimates.

Sim	<i>Simulation Replication</i>
-----	-------------------------------

Description

Simulation Replication

Usage

```
Sim(  
  taskid,  
  repid,  
  output_folder,  
  overwrite,  
  integrity,  
  params_taskid,  
  alpha,  
  m,  
  R,  
  B,  
  mplus_bin,  
  nbmi  
)
```

Arguments

- taskid Positive integer. Task ID.
- repid Positive integer. Replication ID.
- output_folder Character string. Output folder.

overwrite	Logical. Overwrite existing output in output_folder.
integrity	Logical. If integrity = TRUE, check for the output file integrity when overwrite = FALSE.
params_taskid	Data frame with a single row. Simulation parameters for a specific taskid.
alpha	Numeric vector. Significance level.
m	Positive integer. Number of imputations.
R	Positive integer. Number of Monte Carlo replications.
B	Positive integer. Number of bootstrap samples.
mplus_bin	Character string. Path of Mplus binary.
nbmi	Logical. If nbmi = TRUE, include MINB, NBMI, and StackedMINB.

Value

The output is saved as an external file in output_folder.

Author(s)

Ivan Jacob Agaloos Pesigan

SimAmputeData

Simulation Replication - AmputeData

Description

Simulation Replication - AmputeData

Usage

```
SimAmputeData(taskid, repid, output_folder, seed, suffix, overwrite, integrity)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
seed	Integer. Random seed.
suffix	Character string. Output of manMCMedMiss:::SimSuffix().
overwrite	Logical. Overwrite existing output in output_folder.
integrity	Logical. If integrity = TRUE, check for the output file integrity when overwrite = FALSE.

Details

This function is executed via the Sim function.

Value

The output is saved as an external file in output_folder.

Author(s)

Ivan Jacob Agaloos Pesigan

SimFitModelMI

Simulation Replication - FitModelMI

Description

Simulation Replication - FitModelMI

Usage

```
SimFitModelMI(
  taskid,
  repid,
  output_folder,
  seed,
  suffix,
  overwrite,
  integrity,
  mplus_bin
)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
seed	Integer. Random seed.
suffix	Character string. Output of manMCMedMiss:::SimSuffix().
overwrite	Logical. Overwrite existing output in output_folder.
integrity	Logical. If integrity = TRUE, check for the output file integrity when overwrite = FALSE.
mplus_bin	Character string. Path of Mplus binary.

Details

This function is executed via the Sim function.

Value

The output is saved as an external file in output_folder.

Author(s)

Ivan Jacob Agaloos Pesigan

SimFitModelML

Simulation Replication - FitModelML

Description

Simulation Replication - FitModelML

Usage

```
SimFitModelML(
  taskid,
  repid,
  output_folder,
  seed,
  suffix,
  overwrite,
  integrity,
  mplus_bin
)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
seed	Integer. Random seed.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .
overwrite	Logical. Overwrite existing output in <code>output_folder</code> .
integrity	Logical. If <code>integrity = TRUE</code> , check for the output file integrity when <code>overwrite = FALSE</code> .
mplus_bin	Character string. Path of Mplus binary.

Details

This function is executed via the `Sim` function.

Value

The output is saved as an external file in `output_folder`.

Author(s)

Ivan Jacob Agaloos Pesigan

SimFN	<i>Simulation File Name</i>
-------	-----------------------------

Description

Simulation File Name

Usage

```
SimFN(data_type, output_type, output_folder, suffix)
```

Arguments

data_type	Character string. Input data type. Valid values include "complete-00", "mar-30", "mar-20", "mar-10", "mcar-30", "mcar-20", and "mcar-10"
output_type	Character string. Output type. Valid values include "data", "fit-mi", "fit-ml", "mc-mi", "mc-ml", "mi-nb", "nb-mi", "nb-ml", "sig-mi", "sig-ml", and "stackedmi-nb"
output_folder	Character string. Output folder.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .

ValueReturns a character string file name with the `output_folder` in the OS-specific format.

SimGenData	<i>Simulation Replication - GenData</i>
------------	---

Description

Simulation Replication - GenData

Usage

```
SimGenData(
  taskid,
  repid,
  output_folder,
  params_taskid,
  seed,
  suffix,
  overwrite,
  integrity
)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
params_taskid	Data frame with a single row. Simulation parameters for a specific taskid.
seed	Integer. Random seed.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .
overwrite	Logical. Overwrite existing output in <code>output_folder</code> .
integrity	Logical. If <code>integrity = TRUE</code> , check for the output file integrity when <code>overwrite = FALSE</code> .

Details

This function is executed via the `Sim` function.

Value

The output is saved as an external file in `output_folder`.

Author(s)

Ivan Jacob Agaloos Pesigan

SimImputeData

Simulation Replication - ImputeData

Description

Simulation Replication - ImputeData

Usage

```
SimImputeData(
  taskid,
  repid,
  output_folder,
  seed,
  suffix,
  overwrite,
  integrity,
  m,
  mplus_bin
)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
seed	Integer. Random seed.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .
overwrite	Logical. Overwrite existing output in <code>output_folder</code> .
integrity	Logical. If <code>integrity = TRUE</code> , check for the output file integrity when <code>overwrite = FALSE</code> .
m	Positive integer. Number of imputations.
mplus_bin	Character string. Path of Mplus binary.

Details

This function is executed via the `Sim` function.

Value

The output is saved as an external file in `output_folder`.

Author(s)

Ivan Jacob Agaloos Pesigan

SimJointSigMI

Simulation Replication - JointSigMI

Description

Simulation Replication - JointSigMI

Usage

```
SimJointSigMI(
  taskid,
  repid,
  output_folder,
  seed,
  suffix,
  overwrite,
  integrity,
  alpha
)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
seed	Integer. Random seed.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .
overwrite	Logical. Overwrite existing output in <code>output_folder</code> .
integrity	Logical. If <code>integrity = TRUE</code> , check for the output file integrity when <code>overwrite = FALSE</code> .
alpha	Numeric vector. Significance level.

Details

This function is executed via the `Sim` function.

Value

The output is saved as an external file in `output_folder`.

Author(s)

Ivan Jacob Agaloos Pesigan

SimJointSigML

Simulation Replication - JointSigML

Description

Simulation Replication - JointSigML

Usage

```
SimJointSigML(
  taskid,
  repid,
  output_folder,
  seed,
  suffix,
  overwrite,
  integrity,
  alpha
)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
seed	Integer. Random seed.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .
overwrite	Logical. Overwrite existing output in <code>output_folder</code> .
integrity	Logical. If <code>integrity = TRUE</code> , check for the output file integrity when <code>overwrite = FALSE</code> .
alpha	Numeric vector. Significance level.

Details

This function is executed via the `Sim` function.

Value

The output is saved as an external file in `output_folder`.

Author(s)

Ivan Jacob Agaloos Pesigan

SimMCMI

Simulation Replication - MCMI

Description

Simulation Replication - MCMI

Usage

```
SimMCMI(
  taskid,
  repid,
  output_folder,
  seed,
  suffix,
  overwrite,
  integrity,
  R,
  alpha
)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
seed	Integer. Random seed.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .
overwrite	Logical. Overwrite existing output in <code>output_folder</code> .
integrity	Logical. If <code>integrity = TRUE</code> , check for the output file integrity when <code>overwrite = FALSE</code> .
R	Positive integer. Number of Monte Carlo replications.
alpha	Numeric vector. Significance level.

Details

This function is executed via the `Sim` function.

Value

The output is saved as an external file in `output_folder`.

Author(s)

Ivan Jacob Agaloos Pesigan

 SimMCML

Simulation Replication - MCML

Description

Simulation Replication - MCML

Usage

```
SimMCML(
  taskid,
  repid,
  output_folder,
  seed,
  suffix,
  overwrite,
  integrity,
  R,
  alpha
)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
seed	Integer. Random seed.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .
overwrite	Logical. Overwrite existing output in <code>output_folder</code> .
integrity	Logical. If <code>integrity = TRUE</code> , check for the output file integrity when <code>overwrite = FALSE</code> .
R	Positive integer. Number of Monte Carlo replications.
alpha	Numeric vector. Significance level.

Details

This function is executed via the `Sim` function.

Value

The output is saved as an external file in `output_folder`.

Author(s)

Ivan Jacob Agaloos Pesigan

 SimMINB

Simulation Replication - MINB

Description

Simulation Replication - MINB

Usage

```
SimMINB(
  taskid,
  repid,
  output_folder,
  seed,
  suffix,
  overwrite,
  integrity,
  B,
  alpha
)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
seed	Integer. Random seed.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .
overwrite	Logical. Overwrite existing output in <code>output_folder</code> .
integrity	Logical. If <code>integrity = TRUE</code> , check for the output file integrity when <code>overwrite = FALSE</code> .
B	Positive integer. Number of bootstrap samples.
alpha	Numeric vector. Significance level.

Details

This function is executed via the `Sim` function.

Value

The output is saved as an external file in `output_folder`.

Author(s)

Ivan Jacob Agaloos Pesigan

SimNBMI

Simulation Replication - NBMI

Description

Simulation Replication - NBMI

Usage

```
SimNBMI(
  taskid,
  repid,
  output_folder,
  seed,
  suffix,
  overwrite,
  integrity,
  B,
  m,
  mplus_bin
)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
seed	Integer. Random seed.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .
overwrite	Logical. Overwrite existing output in <code>output_folder</code> .
integrity	Logical. If <code>integrity = TRUE</code> , check for the output file integrity when <code>overwrite = FALSE</code> .
B	Positive integer. Number of bootstrap samples.
m	Positive integer. Number of imputations.
mplus_bin	Character string. Path of Mplus binary.

Details

This function is executed via the `Sim` function.

Value

The output is saved as an external file in `output_folder`.

Author(s)

Ivan Jacob Agaloos Pesigan

 SimNBML

Simulation Replication - NBML

Description

Simulation Replication - NBML

Usage

```
SimNBML(
  taskid,
  repid,
  output_folder,
  seed,
  suffix,
  overwrite,
  integrity,
  B,
  mplus_bin
)
```

Arguments

taskid	Positive integer. Task ID.
repid	Positive integer. Replication ID.
output_folder	Character string. Output folder.
seed	Integer. Random seed.
suffix	Character string. Output of <code>manMCMedMiss:::SimSuffix()</code> .
overwrite	Logical. Overwrite existing output in <code>output_folder</code> .
integrity	Logical. If <code>integrity = TRUE</code> , check for the output file integrity when <code>overwrite = FALSE</code> .
B	Positive integer. Number of bootstrap samples.
mplus_bin	Character string. Path of Mplus binary.

Details

This function is executed via the `Sim` function.

Value

The output is saved as an external file in `output_folder`.

Author(s)

Ivan Jacob Agaloos Pesigan

SimProj

Simulation Project Name

Description

Simulation Project Name

Usage

`SimProj()`

Value

Returns the project name as a character string.

Author(s)

Ivan Jacob Agaloos Pesigan

Sum	<i>Summarize Simulations</i>
-----	------------------------------

Description

Summarize Simulations

Usage

```
Sum(taskid, reps, output_folder, params_taskid, nbmi)
```

Arguments

taskid	Positive integer. Task ID.
reps	Positive integer. Number of replications.
output_folder	Character string. Output folder.
params_taskid	Data frame with a single row. Simulation parameters for a specific taskid.
nbmi	Logical. If nbmi = TRUE, include MINB, NBMI, and StackedMINB.

Value

The output is saved as an external file in output_folder.

Author(s)

Ivan Jacob Agaloos Pesigan

SumBind	<i>Bind Results</i>
---------	---------------------

Description

Bind Results

Usage

```
SumBind(tasks, output_folder, data_raw_folder, params)
```

Arguments

tasks	Positive integer. Number of simulations tasks or cases.
output_folder	Character string. Output folder.
data_raw_folder	Character string. data-raw folder in the project directory.
params	Data frame. Simulation parameters for all simulation tasks or cases.

Value

Returns a dataframe of results and parameters.

Author(s)

Ivan Jacob Agaloos Pesigan

SumHit

Extract Zero Hit and Theta Hit from Summary Output

Description

Extract Zero Hit and Theta Hit from Summary Output

Usage

```
SumHit(summary_output, params_taskid)
```

Arguments

summary_output Numeric matrix. Output of Sum* functions.

params_taskid Data frame with a single row. Simulation parameters for a specific taskid.

Value

Returns a dataframe of results and parameters.

Author(s)

Ivan Jacob Agaloos Pesigan

SumJointSigMI

Summarize Simulations - SimJointSigMI

Description

Summarize Simulations - SimJointSigMI

Usage

```
SumJointSigMI(taskid, reps, output_folder, params_taskid)
```

Arguments

taskid	Positive integer. Task ID.
reps	Positive integer. Number of replications.
output_folder	Character string. Output folder.
params_taskid	Data frame with a single row. Simulation parameters for a specific taskid.

Details

This function is executed via the Sum function.

Value

Returns a numeric matrix.

Author(s)

Ivan Jacob Agaloos Pesigan

SumJointSigML

Summarize Simulations - SimJointSigML

Description

Summarize Simulations - SimJointSigML

Usage

```
SumJointSigML(taskid, reps, output_folder, params_taskid)
```

Arguments

taskid	Positive integer. Task ID.
reps	Positive integer. Number of replications.
output_folder	Character string. Output folder.
params_taskid	Data frame with a single row. Simulation parameters for a specific taskid.

Details

This function is executed via the Sum function.

Value

Returns a numeric matrix.

Author(s)

Ivan Jacob Agaloos Pesigan

SumMCMI	<i>Summarize Simulations - SimMCMI</i>
---------	--

Description

Summarize Simulations - SimMCMI

Usage

SumMCMI(taskid, reps, output_folder, params_taskid)

Arguments

- taskid Positive integer. Task ID.
- reps Positive integer. Number of replications.
- output_folder Character string. Output folder.
- params_taskid Data frame with a single row. Simulation parameters for a specific taskid.

Details

This function is executed via the Sum function.

Value

Returns a numeric matrix.

Author(s)

Ivan Jacob Agaloos Pesigan

SumMCML	<i>Summarize Simulations - SimMCML</i>
---------	--

Description

Summarize Simulations - SimMCML

Usage

SumMCML(taskid, reps, output_folder, params_taskid)

Arguments

- taskid Positive integer. Task ID.
- reps Positive integer. Number of replications.
- output_folder Character string. Output folder.
- params_taskid Data frame with a single row. Simulation parameters for a specific taskid.

Details

This function is executed via the Sum function.

Value

Returns a numeric matrix.

Author(s)

Ivan Jacob Agaloos Pesigan

SumMINB	<i>Summarize Simulations - SimMINB</i>
---------	--

Description

Summarize Simulations - SimMINB

Usage

SumMINB(taskid, reps, output_folder, params_taskid)

Arguments

- taskid Positive integer. Task ID.
- reps Positive integer. Number of replications.
- output_folder Character string. Output folder.
- params_taskid Data frame with a single row. Simulation parameters for a specific taskid.

Details

This function is executed via the Sum function.

Value

Returns a numeric matrix.

Author(s)

Ivan Jacob Agaloos Pesigan

SumNBMI	<i>Summarize Simulations - SimNBMI</i>
Description	
Summarize Simulations - SimNBMI	
Usage	
SumNBMI(taskid, reps, output_folder, params_taskid)	
Arguments	
taskid	Positive integer. Task ID.
reps	Positive integer. Number of replications.
output_folder	Character string. Output folder.
params_taskid	Data frame with a single row. Simulation parameters for a specific taskid.
Details	
This function is executed via the Sum function.	
Value	
Returns a numeric matrix.	
Author(s)	
Ivan Jacob Agaloos Pesigan	

SumNBML	<i>Summarize Simulations - SimNBML</i>
Description	
Summarize Simulations - SimNBML	
Usage	
SumNBML(taskid, reps, output_folder, params_taskid)	
Arguments	
taskid	Positive integer. Task ID.
reps	Positive integer. Number of replications.
output_folder	Character string. Output folder.
params_taskid	Data frame with a single row. Simulation parameters for a specific taskid.

Details

This function is executed via the Sum function.

Value

Returns a numeric matrix.

Author(s)

Ivan Jacob Agaloos Pesigan

TabDescribe	<i>Descriptive Statistics of Type I Error Rate, Statistical Power, and Miss Rate</i>
-------------	--

Description

Descriptive Statistics of Type I Error Rate, Statistical Power, and Miss Rate

Usage

```
TabDescribe(results, type, mech, prop, n = NULL)
```

Arguments

results	Data frame. The package data frame results().
type	Character string. Type of results to plot. Valid values are "type1", "power", and "miss" for Type I error rate, statistical power, and miss rate, respectively.
mech	Character string. Missing data mechanism. Valid values are "COMPLETE", "MAR", and "MCAR".
prop	Numeric. Proportion of missing data. Valid values are .1, .2, .3. Note that if mech = "COMPLETE", prop will be set to 0.
n	Vector of positive integers. Sample size. Valid values are 50, 75, 100, 150, 200, 250, 500, and 1000. If n = NULL, use all sample sizes.

Value

Returns a table of means (M), standard deviations (SD), and row counts (N).

Author(s)

Ivan Jacob Agaloos Pesigan

Tree

Conditional Inference Tree

Description

Conditional Inference Tree

Usage

```
Tree(results, type, alpha = 1e-04, maxdepth = 0, dichotomize = TRUE)
```

Arguments

results	Data frame. The package data frame results().
type	Character string. Type of results to plot. Valid values are "type1", "power", and "miss" for Type I error rate, statistical power, and miss rate, respectively.
alpha	Significance level used for splitting.
maxdepth	maximum depth of the tree. The default maxdepth = 0 means that no restrictions are applied to tree sizes.
dichotomize	Logical. Dichotomize the outcome variable into robust = TRUE and robust = FALSE.

Value

Returns the result of `party::ctree()`.
